

## Flea Exterminator: General Application Instructions

10 Mil. Beneficial Nematodes will treat 3,600 square feet (334 M<sup>2</sup>)

Best temperatures to apply: Air temperature from 40° F to 85° F. Soil temperatures (at 2" depth) should be above 42 F and below 85° F.

For flea larva application you need only apply to areas that are shaded most of the day. Flea larva generally do not inhabit full sun areas.

To apply:

1. Apply at dusk if possible
2. Add contents to 2 gal. cold water and mix for 1 minute
3. Add to sprayer REMOVING sprayer filters
4. Pre-water area
5. Gently shake sprayer as you apply with coarse spray
6. Water again to wash the nematodes off the foliage
7. Can be sprayed directly into bore holes in trees/bushes
